2010 EP Text:

The organization identifies potential emergencies that could affect demand for its services or its ability to provide those services. (See also IC.01.06.01, EP 4)
 Note: Some organizations refer to this process of identifying potential emergencies as a hazard vulnerability analysis (HVA). Organizations have flexibility in creating either a single HVA that accurately reflects all locations where individuals are served by the organization, or multiple HVAs for the different locations where individuals are served. Some remote sites may be significantly different from the main site (for example, in terms of hazards and population served); in such situations, a separate HVA is appropriate.

Standard EM.02.01.01**2010 Standard Text:**

The organization has an Emergency Management Plan.

Note: The organization's Emergency Management Plan (EMP) is designed to coordinate its communications, resources and assets, safety and security, staff responsibilities, utilities, and clinical and support activities during an emergency (refer to Standards EM.02.02.01, EM.02.02.03, EM.02.02.05, EM.02.02.07, and EM.02.02.11). Although emergencies have many causes, the effects on these areas of the organization and the required response effort may be similar. This "all hazards" approach supports a general response capability that is sufficiently nimble to address a range of emergencies of different duration, scale, and cause. For this reason, the Plan's response procedures address the prioritized emergencies but are also adaptable to other emergencies that the organization may experience.
