## Optional Self-Assessment for Primary Care Medical Home (PCMH) Certification for Ambulatory Health Care Centers

The following tool is a useful document that may be helpful to your ambulatory care practice as you pursue PCMH certification for your facilities. The tool assesses Elements of Performance (EPs) which are the actions, processes and structures that must be implemented to achieve the standard. These EPs are in addition to those required for your ambulatory care accreditation.

Survey Activity line below each explanation indicates which activity within the survey should be addressed.

If you would like to use this tool, you may find it most beneficial to consider all sites you are considering for PCMH certification.

- ✓ Check "yes" when your organization believes it is in compliance
- ✓ Check "no" when your organization is not in compliance

Based on your answers, your organization may be able to highlight areas where continued work needs to be completed in order to be in compliance with the standards.

## I. OPERATIONAL CHARACTERISTIC: PATIENT-CENTEREDNESS

## **Providing Information to Patients: PCMH and Primary Care Clinician**

1. The organization/site **provides information to the patient** about: (indicate  $\underline{Y}$ es or  $\underline{N}$ o to each item)

Yes	s <b>No</b> The mission, vision, and goals of the primary care medical home. [RI.01.04.03/EP 1]
	<u>Tip:</u> Review flyers, brochures, posters, website, and other materials provided to patients. Look to see how they communicate a focus on patient-centered and team-based comprehensive and coordinated care, a systems-based approach to quality and safety, and enhanced patient access.
	☐ How the primary care medical home functions, its scope of care, and its types of services. [RI.01.04.03/EP 2]
	☐ How the primary care medical home manages patient care, including the following: [RI.01.04.03/EP 3]

- o Selection of a primary care clinician
- o Involvement in his or her own treatment plan
- o Management of referrals
  - o Coordination of care
  - Collaboration with patient-selected clinicians who provide specialty care or second opinions
  - Communication with the primary care medical home about health care concerns/other information

The organization uses <b>clinical decision support tools</b> to guide decision making. [PC.01.03.01/EP 45]  Clinical decision support is software designed to assist in clinical decision making. A clinical decision supp system matches two or more characteristics of an individual patient to a computerized clinical knowledge base and provides patient-specific assessments or recommendations to the clinician. The clinician makes decisions based on clinical expertise, knowledge of the patient, and the information provided through the clinical decision support system. A clinical decision support system can be used at different points in the coprocess such as diagnosis, treatment, and post-treatment care, including the prediction of future events.

	Qualifications of Primary Care Clinician & Interdisciplinary Team  Primary care clinicians have the educational background and broad-based knowledge and experience necessary to handle most medical and other health care needs of the patients who selected them. This includes resolving conflicting recommendations for car [HR.03.01.01/EP 1]  A primary care clinician is a Doctor of Medicine or osteopathy, or an advanced practice nurse or physicia assistant practicing in collaboration with a Doctor of Medicine or osteopathy. The term "collaboration" in this context means that health care providers work together to meet the needs of the patient. It is not the intent of this requirement to impose additional restrictions on the scope of practice of an advanced practic nurse, nor is it meant to preempt applicable state law.  YES at all sites YES at some sites: (list sites) NO						

	The primary care clinician and the interdisciplinary team members <b>function within their scope</b> of practice and in accordance with privileges granted. [HR.01.02.07/EP3]
