## GAP Analysis for PCMH Readiness

### Brainstorm Barriers to Success

*Barriers to Success Assessment*

*Facilitating Change™*

#### ▀ About the Tool

- The Barriers to Success Assessment tool is used to identify physical, relationship, financial, political, policy, cultural, or resource barriers you might encounter during your change initiative. These might be barriers the team is currently experiencing or potential barriers the team might experience in the future.

#### ▀ How to Use the Tool

- Have the team brainstorm barriers for each of the categories: physical, relationship, financial, political, policy, cultural, or resource. Add additional categories if necessary and brainstorm barriers for each.
- Then ask team members to consider the potential impact the barriers could have on your project and rate the impact each will have on your project on a scale of 1 (no impact), 5 (medium impact) to 9 (high impact).
- Then consider what actions may be needed to overcome these barriers to success.
